STRONG CRITICAL THINKING IN GROUPS

Listen actively and provide honest feedback on group discussions or presentations. If you work hard to provide true ratings and work to improve them over time, both you and your group members will develop stronger critical thinking skills. Use this form even if you were a part of the presentation of group discussion, as reflecting back on a thinking process is an effective technique for building critical thinking skills and habits of mind.

Think carefully about each area below and determine how well you were able to observe each of the objectives in the presentation. Use a 4, 3, 2, or 1 to rate the discussion:

- "Definitely Strong" (Very supportive of learning, I integrated the information and saw the relationships being discussed). = 4
- "Acceptably Strong" (Somewhat supportive of learning, most information was clear and added to my mastery of this area). = 3
- "Somewhat Lacking" (On the whole, not enough relevant data presented and many key relationships inadequately discussed). = 2
- "Definitely Lacking" (Not supportive of my learning, many missing, inaccurate, biased, or poorly presented ideas on this topic). = 1

Achieving a clear idea of the scope and nature of the problem:

a. The early discussion of the problem made key aspects for consideration clear. _______
b. ‘Key terms’ being used in the discussion were defined accurately and clearly. _______
c. The ‘key issues’ were presented accurately and clearly. _______
d. Theories, models, and examples used to understand the problem were accurate and clear. _______

Which aspects of the problem (potentially key issues) were left out or inadequately addressed?

Analyzing the problem being discussed:

e. Relevant evidence/data/documents about the problem were retrieved and presented when available. _______
f. All relevant positions on both sides of the issue were considered. _______
g. There was honesty in the presentation (at this stage there was no observable bias or effort to persuade). _______
h. Reasons were provided for any conclusions or opinions they presented. _______
i. Key problem aspects were analyzed and fairly evaluated in relationship to the problem being discussed. _______

Briefly diagram, concept map or summarize the problem being discussed:

Considering the conclusions or solutions developed by the group:

j. The relevant ethical/social values/laws/regulations were identified and their relevance explained. _______
k. The group identified and weighed any opposing values or rules, connecting them accurately to the case. _______
l. The relative feasibility of varying solutions was identified and evaluated. _______
m. In evaluating solutions, consequences of both action and inaction were considered. _______
n. Sound reasons were given to justify any conclusions or recommendations. _______
o. The group reviewed their thinking process while presenting their conclusion(s). _______

What solutions were identified (conclusions reached)?

The final position taken by the group was (reason based solution plan):

I will continue to reflect on this group position for these reasons (limitations or new implications):
